

Plato-Twin-Maker Comprehensive Testing & Improvement Report

A thorough evaluation of the Hermit Crab Factory: bugs found, edge cases tested, and a roadmap for making it production-ready.

17/17 unit tests pass. All 3 examples and both tutorials verified. **3 bugs confirmed** (double-arrow signatures, language detection misclassification, missing async extraction). **8 improvement recommendations** prioritized for v0.1.1 through v0.3.0. The core pipeline works reliably; the self-glue principle holds under all edge cases tested.

Repository: github.com/SuperInstance/plato-twin-maker

Test Date: May 18, 2026

Python: 3.13.5 | **pytest:** 9.0.3
